Contents Part B

Regular Research Papers

An investigation of the morphology–wear performance relationships in polyetherpolyurethane thermoplastic elastomers 645
J. I. Mardel, A. J. Hill, K. R. Chynoweth, M. E. Smith, C. H. J. Johnson and T. J. Bastow (Clayton, Vic., Australia)

Selected thermoplastic bearing materials for use at elevated temperatures 649
A. M. Häger, K. Friedrich (Kaiserslautern, Germany) and R. Junghans (Chemnitz, Germany)

Effect of temperature on the wear of unfilled and filled liquid crystal polymers 656
Y. Uchiyama, Y. Uezi (Ishikawa, Japan), A. Kudo and T. Kimura (Osaka, Japan)

Effect of sliding velocity on the wear-effect of time–temperature equivalence 662
J. Song and G. W. Ehrenstein (Erlangen-Tennenlohe, Germany)

Specimen diameter, impact velocity, erosion rate and particle density in a slurry pot erosion tester 669
H. M. Clark (Lawrence, KS, USA)

Modeling of abrasive particle trajectories during erosion by a slurry jet 679
S. Turenne (Boucherville, Canada) and M. Fiset (Québec, Canada)

Relationship between surface hardness and erosion damage caused by solid particle impact 688
Y. I. Oka, M. Matsumura and T. Kawabata (Higashi-Hiroshima, Japan)

Lubricated sliding and rolling wear of austempered ductile iron 696
W.-S. Zhou, Q.-D. Zhou (Xian, People's Republic of China) and S.-K. Meng (Yunnan, People's Republic of China)

Measurements of wear and acoustic emission from fuel-wetted surfaces 703
R. J. Boness (Kingston, Ont., Canada)

Review of mechanisms of erosion–corrosion of alloys at elevated temperatures 706
M. M. Stack, F. H. Stott and G. C. Wood (Manchester, UK)

Wear and scratch hardness of 304 stainless steel investigated with a single scratch test 713
T. A. Adler and R. P. Walters (Albany, OR, USA)

Wear–corrosion-resistant materials for mechanical components in harsh environments 721
P. L. Ko (Vancouver, B. C., Canada), A. Wozniewski (Calgary, Alta., Canada) and P. A. Zhou (Beijing, China)

Wear resistance of C^+-implanted silicon investigated by scanning probe microscopy 733
T. Miyamoto (Tokyo, Japan), S. Miyake (Saitama, Japan) and R. Kaneko (Tokyo, Japan)

Structure and dose effects on improved wear properties of ion-implanted polymers 739
G. R. Rao, E. H. Lee and L. K. Mansur (Oak Ridge, TN, USA)

Reciprocating sliding wear evaluation of a polymeric/coating tribological system 748
J. F. Braza and R. E. Furst (Torrington, CT, USA)

The wear resistance of diffusion treated surfaces 757
K. G. Budinski (Rochester, NY, USA)

Microstructures and tribological characteristics of electron-beam co-deposited Ag/Mo thin film coatings 763
S. C. Tung and Y.-T. Cheng (Warren, MI, USA)

The differential effect of the hardness of metallic materials on their erosion and abrasion resistance 773
G. Sundararajan (Hyderabad, India)

Movement patterns of abrasive particles in three-body abrasion 782
L. Fang, X. L. Kong, J. Y. Su and Q. D. Zhou (Xian, China)

Repeated impact–abrasion testing of alloy white cast irons. 790
I. R. Sare, B. K. Arnold (Woodville, S.A., Australia), G. A. Dunlop (Torrensville, S.A., Australia) and P. G. Lloyd (Woodville, S.A., Australia)

Three-body abrasive wear of 0.98% carbon steel 802
S. Das, B. K. Prasad, A. K. Jha, O. P. Modi and A. H. Yegneswaran (Bhopal, India)

Study on mechanism of combined action of abrasion and cavitation erosion on some engineering steels 811
K. Zhao, C.-Q. Gu, F. Shen and B.-Z. Lou (Shaanxi, China)

Abrasive wear study of selected white cast irons as liner materials for the mining industry 820
L. Xu, C. Vose and D. StJohn (Cannington, WA, Australia)

Development of abrasion-resistant Ni-hard 4 cast irons 833
J. Liu and Y. Man (Shenyang, China)

Repetitive impact wear of steels 837
R. W. Fricke and C. Allen (Rondebosch, South Africa)

Modelization of damage by abrasion. 848
A. Magnée (Liège, Belgium)

A study of the fundamental mechanisms of erosion using Hertzian fracture tests 856
J.-W. Lu (Chandler, AZ, USA), G. A. Sargent (Dayton, OH, USA) and H. Conrad (Raleigh, NC, USA)

The generation of worn surfaces by the repeated interaction of parallel grooves 864
Y. Xie and J. A. Williams (Cambridge, UK)

Frictional behavior of extremely smooth and hard solids 873
D. E. Kim and N. P. Suh (Cambridge, MA, USA)

An evaluation of the penetration of ceramic femoral heads into polyethylene acetabular cups 880
D. Dowson, B. Jobbins and A. Seyed-Harraf (Leeds, UK)

Sliding friction and wear up to 600 °C of high speed steels and silicon nitrides for gas turbine bearings. 890
T. H. C. Childs (Leeds, UK) and A. Mimaroglu (Bradford, UK)

Quantitative analysis of cam follower wear in relation to various material properties 897
M. Kano (Kanagawa, Japan) and Y. Kimura (Tokyo, Japan)

Role of dielectric properties in the tribological behaviour of insulators 906
S. Fayeulle, H. Berroug, B. Hamzaoui, D. Tréheux (Ecully, France) and C. Le Gressus (Bruyères Le Chatel, France)

A general model for sliding wear in electrical contacts 913
R. G. Bayer (Vestal, NY, USA)

Development of fracture resistant, multilayer films for precision ball bearings 919
G. B. Hopple (Sunnyvale, CA, USA), J. E. Keem (Troy, MI, USA) and S. H. Loewenthal (Sunnyvale, CA, USA)

Short Communications

Comparative dry wear behavior of hard coatings 925
G. Nicoletto, A. Tucci and L. Esposito (Bologna, Italy)

Friction and wear of short-fibre-reinforced rubber composites under various sliding speeds and loads 930
N. Wada (Kobe, Japan) and Y. Uchiyama (Kanazawa, Japan)

Research on fretting wear dependence of hardness ratio and friction coefficient of fretted couple 939
A. Neyman and O. Olszewski (Gdańsk, Poland)

Wear as measured with a four-ball wear tester using fully flooded and vapor phase with condensation lubrication methods. 944
E. E. Klaus, H. Li, C. I. Chen and J. L. Duda (University Park, PA, USA)

Corrosion–wear study of 304 stainless steel in various NaCl solutions 950
C.-W. Wu (Hsinchu, Taiwan)

A model for three-body abrasion of brittle materials. 954
M. Buijs and K. Korpel-van Houten (Eindhoven, Netherlands)

Wear-resistant materials for oil and gas machinery 957
D. Laptev, S. Levin and L. Livshitz (Moscow, Russian Federation)

Trends in developing theoretical and experimental investigations in studying hydroabrasive wear processes 962
T. Gochitashvili (Tbilisi, Georgia)

Case Studies

Application of TiN-coated bushings in the standard method for indicating the wear characteristics of hydraulic fluids in vane pumps 966
A. Kunz, B. Matthes, E. Broszeit and K.-H. Kloos (Darmstadt, Germany)

Mapping the wear of some cutting-tool materials 971
S. C. Lim, Y. B. Liu, S. H. Lee and K. H. W. Seah (Singapore, Singapore)

Investigation of wheel flange wear on the Santander FEVE rail – a case study 975
F. Cantera (Madrid, Spain)

Slip–time history influences on the interaction between friction and wear in contaminated rolling contacts of wheel–rail systems 980
A. R. Savkoor and G. H. Van der Schoor (Delft, The Netherlands)

Specific friction and wear mechanisms in clamping-roller free-wheel clutches 985
K. Dürkopp, H.-J. Böhnke and W. Jorden (Paderborn, Germany)

Comparative wear testing of flooring materials 990
A. P. Monteiro Baptista and M. d. Carmo Vaz (Porto, Portugal)

Wear of bearing liners at low speed rotation of shafts with contaminated oil 996
V. Wikström, E. Höglund and R. Larsson (Luleå, Sweden)

The wear of the shares of plough bodies with rigid and elastic connections to the frame 1002
K. Kufel and K. Wierzcholski (Szczecin, Poland)

Tribological studies of precise friction pairs under operating conditions in a diesel engine 1004
D. Petkova (Gabrovo, Bulgaria)

Laboratory simulation of the wear process of belt conveyor rollers 1012
M. Fiset and D. Dussault (Laval, Que., Canada)

Effect of operating conditions on the wear of wet parts in slurry pumps 1016
H. Zengwen (Wuhan, China) and C. Jinhai (Shijiazhuang, China)

Operational wear in the impeller of a vertical shaft impact breaker 1022
A. Marshall, T. V. Parry and J. M. Wilson (Durham, UK)

Type of wear for the pair Ti6Al4V/PCTFE in ambient air and in liquid nitrogen 1025
J.-L. Bozet (Liège, Belgium)

Wear testing in water slurries 1029
U. Backmark (Solna, Sweden)

Comparison of abrasion model test results and machining tests with PVD-coated indexable inserts 1033
O. Knotek, F. Löffler, W. Beele and G. Krämer (Aachen, Germany)

High silt wear of hydroturbine runners 1040
R. Chattopadhyay (Bombay, India)

Wear behavior of titanium–coating combinations at elevated temperatures 1045
M. Thoma (Munich, Germany)

An analysis of the wear of polymers 1048
D. G. Bellow and N. S. Viswanath (Edmonton, Alta., Canada)

Additional papers

Wear of gears: a case study at Shiraz Cement Plant 1054
M. A. Satter, A. R. Ebadi, K. K. Aghaie, M. R. Fotovati and A. Piroozan (Shiraz, Iran)

The characterization of white layers formed on digger teeth 1059
R. Bulpett, T. S. Eyre and B. Ralph (Uxbridge, UK)

The wear of material in humid–tropical conditions 1066
N. A. Tuan, N. D. Y, P. V. Hung and N. N. Thai (Hanoi, Vietnam)

Tribochemical mechanisms of Si_3N_4 with additives 1068
J. Wei and Q. Xue (Lanzhou, China)

Scale of microstructure effects on the impact resistance of Al_2O_3 1073
R. M. Anderson, T. A. Adler and J. A. Hawk (Albany, OR, USA)

Characterization of sliding wear in dynamically stressed material. 1081
S. Karmakar, U. R. K. Rao and A. Sethuramiah (New Delhi, India)

Effect of fillers on the friction and wear behaviour of ultrahigh molecular weight polyethylene during water-lubricated reciprocating sliding wear 1091
K. Marcus and C. Allen (Rondebosch, South Africa)

Wear and friction of a unidirectional carbon fiber–glass matrix composite against various counterpart. 1103
Z. Lu, K. Friedrich (Kaiserslautern, Germany), W. Pannhorst and J. Heinz (Mainz, Germany)

Erosion prediction of pure metals and carbon steels 1114
R. R. R. Ellermaa (Tallinn, Estonia)

A study of friction and wear characteristics of copper- and iron-based sintered materials 1123
S. Kang (Seoul, South Korea)

Giant-magnetostrictive vibrator system for fretting testing at low amplitudes 1129
O. Vingsbo and J. Schön (Houston, TX, USA)

Fundamentals of stick–slip 1139
C. Gao, D. Kuhlmann-Wilsdorf and D. D. Makel (Charlottesville, VA, USA)

Boundary film for structural ceramic materials 1150
O. O. Ajayi, A. Erdemir, J.-H. Hsieh, R. A. Erck, G. R. Fenske and F. A. Nichols (Argonne, IL, USA)
